

JetAdvice Hybrid

Get the best of both worlds, data in both the cloud and at your preferred storage location and integrated directly into your back office system. JetAdvice Hybrid makes the valuable information of customer and device data readily available and useful for your business processes and tools.

The Hybrid Model

For customers with stringent IT infrastructure policies in place or who have concerns about a hosted SaaS model; we offer our proven Hybrid Model.

In the Hybrid Model, it utilizes the on-premise concept combining the benefits of the hosted solution and the ability to have the data stored in a designated server; either on-site or preexisting storage location.

Critical and Valuable Data

JetAdvice recognizes that the critical and valuable data used in Managed Print Services business is mainly associated with long term value and that the same data is also used across multiple systems and business processes.

JetAdvice Hybrid is the enabler of creating true business value out of this data allowing the connection from JetAdvice Manager to businesses' back-end systems.

To survive as a business today decision makers must have data available to them, in real-time, so they can use this valuable information to make decisions on the fly.

Best of two worlds

We understand the combination of "the cloud" and "local data" sources will appeal to companies with strict policies for their IT infrastructure.

This combination provides the highest value solution including high quality service with the comfort of having the data available locally.

Easy Integration

- ERP
- CRM
- Statistic
- Forecast
- Assessment
- Business logic
- And more

Online Hosting, Cloud or SaaS...

The data collected from customers is stored at a trusted hosting facility and the data is made available in the cloud through the online application service SaaS (Software as a Service). This method removes the software updating and maintenance burdens from customers who would normally have to install and maintain the software locally.

JetAdvice Manager is your trusted solution to make sure you have access to the tools and data when you need it, wherever you might be.

Benefits

- Adding features and fixing bugs faster
- Easy and unlimited scalability
- Always on latest version of operating system and JetAdvice
- Continuous upgrades and updates
- Always latest device and supply information available

On-Premise, Private Cloud or where you prefer

The data you need to make your billing, assessments, business intelligence, service, optimization - or simply to make sure you have the data at your fingertips.

Data collected from your customers can be stored anywhere, in any format.

To be transparent, we can store your data on your preferred local database, at your preferred location; being in your building or at your preferred hosting center or any place of your choice.

The data will be stored where your key software would need to get access to the data.

The JetAdvice Hybrid approach combines an already robust secure MPS solution with your own internal data, at your fingertips.

Benefits

- Data will be updated every day at your preferred storage location
- Data is always available internally
- Meet internal security expectations
- Internal network bandwidth

JetAdvice Manager

To fully benefit from JetAdvice Hybrid, you must already use JetAdvice Manager as your MPS software to collect and deliver the data you need to run your business.

JetAdvice is a cloud based assessment and print management solution providing a total overview of a company's printing fleet usage and is the ideal tool to keep operational costs low and minimize environmental impact.

The solution is built on EuroForm's vast experience and incorporates the newest technologies from Microsoft.

More Info...

For more information about our high level security measures, check out the detailed *Security* and *Security Hosting* White Papers.

Our extensive security measures and high availability, which meets most companies' internal policies, assures customers they can have full confidence in JetAdvice Manager's reliability.
